
Networking Lunch: Infrastructure for Pragmatic Science Practice-Based Research Networks

Don Nease, MD; Christina Hester, PhD

Why should you consider working with a PBRN?

When should an investigator engage with a PBRN? (early in concept development, proposal writing, later after funding?)

What are various types of PBRNs, national, state, regional, health system based, and how do they differ?

What should you expect in working with a PBRN as a partner? (Funding, workforce, etc.)

What's the relationship between the PBRN team, staff and the study team? (i.e. who actually does the work with and in the practices?)

What do PBRNs will need from their partners? (i.e., \$, study team support for implementation, training, etc.)

What does the process look like once a study is funded?
