

Bethany Kwan: Dr. Weiner's handout is here: https://coprhcon.learningtimesevents.org/wp-content/uploads/2021/05/BryanWeiner_fillable.pdf

Russell Glasgow: James Pittman, Borsika Rabin and colleagues are working on some quantitative survey type items for PRISM factors... in progress

Amy Huebschmann (she/her): Self-reflection as an implementation scientist: it's very ironic that our measures for impl science are not pragmatic

Tina Studts: These issues are what drove me to learn about qualitative methods!

Bethany Kwan: Confession as an implementation scientist: I always seem to have to change the measures to fit my project and make sense in context

Jodi Holtrop: @Tina - agreed about now doing a lot of qualitative.

Tina Studts: and you were trained as a psychologist!!! I taught a measurement class and then violated everything I taught, lol!

Bethany Kwan: Don't tell my psychometrics teachers... what's pragmatic sometimes needs to take precedence

Russell Glasgow: @Bryan..... thoughts about issue Bethany is raising?... and also if 'added' items are added to existing constructs/scales vs. added as extra items to address specific context/purpose

Russell Glasgow: Apologize, but did I miss discussion of PAPERS criteria for how pragmatic measures are?

Bethany Kwan: https://coprhcon.learningtimesevents.org/wp-content/uploads/2021/05/BryanWeiner_fillable.pdf

Bethany Kwan: One thing we talked about in qualitative was starting with a high level question and then probing around the specific constructs
